

Introducing the GyNOVA G•SPEC

The G•SPEC Weighted Vaginal Speculum is the first and only *articulated* weighted vaginal speculum. It easily adjusts to any of three positions, readily accommodating the anatomical variations encountered during surgery.

The G•SPEC Weighted Vaginal Speculum uses convenient disposable plastic blades in 8, 10 and 12 cm lengths. The blades are ribbed to control slippage and are non-conductive. The ergonomic design of the 2lb handle makes the G•SPEC more comfortable and easier to use than standard weighted speculums. Made of 304 Stainless Steel, the handle is reusable and autoclaveable.

The time saving G•SPEC design optimizes surgical efficiency and provides immediate situational options as required.

G•SPEC disposable plastic blades are available in three sizes - 9, 10 and 12 cm long.

PATENT PENDING

After 16 years in practice I found myself frustrated by the limitations of the standard weighted speculum. I saw the need for a radical change in the form and function of this basic gynecologic surgical tool.

The Guinan Speculum (G•SPEC) and GyNOVA, L.L.C. are the result.
